**Wildlife Habitat Appraisal Guide**  
**Prairie and Grassland Community Model**

**Applicant(s):****Date:****Farm Number:****Tract Number:****Field Number(s):****County:**

The use of "Edge" vs. "Openland" will be based on landowner's objectives and the landscape situation in which the tract is located. Quail management is the midst of 2000 acres of grassland may not be appropriate, as is prairie chicken management in the midst of 80 to 120 acre mixed cover types. As always, professional judgment is needed to tailor the WHDP to fit landscape needs and ensure likelihood of success.)

If using this model for "old field" or "idle areas" and tree canopy coverage is more than 25% use the Woodland or Savanna Community Model. If tree canopy is equal to or less than 25%, use the Prairie/Grassland Model. If area is managed to maintain a seral stage early in succession, the Early Successional Vegetation Model will be used.

**Instructions:** Answer each of the questions (1 - 7) below by circling the appropriate points for both the existing and planned conditions. N/A = Not Applicable in the Wildlife Habitat Development Plan (WHDP), CSG = Cool Season Grasses, WSG = Warm Season Grasses
